

Port of Houston Authority Pension Plan

Investment Performance Review
Period Ended March 31, 2016

1st Quarter 2016 Market Environment

- The 1st quarter of 2016 proved volatile as broad equity markets declined significantly through the first half of the period due to global economic growth concerns, low and falling energy prices, and the prospect of rising interest rates in the U.S. At its lowest point on February 11, 2016, the S&P 500 had fallen by -10.3%. However, equity prices recovered through the second half of the quarter as investors reacted to improving economic data, a recovery in commodity prices, and various central bank announcements of continued monetary policy easing. As a result, the S&P 500 appreciated 13.0% through the end of March and finished the quarter with a return of 1.3%.
- Each of the U.S. stock market indices we track followed a similar pattern to the S&P 500 and were modestly positive through the 1st quarter with the exception of the Russell 2000, which returned -1.5% for the period. For the 1-year period, domestic large cap stock indices were the best performers, with the S&P 500 and Russell 1000 returning 1.8% and 0.5%, respectively, while domestic small- (-9.8%) and mid-capitalization (-4.0%) indices posted negative results for the period. In U.S. dollar (USD) terms, the MSCI Emerging Market (EM) Index (net) surged in the back half of the period, returning a solid 5.7% for the quarter. Developed international markets did not fare as well with the MSCI EAFE Index (net) finishing the quarter with a return of -3.0%. Both international benchmarks were weak over the 1-year period with the MSCI EAFE Index returning -8.3% and the MSCI EM Index returning -12.0%.
- The U.S. Treasury yield curve flattened throughout the 1st quarter. The drop in yields was primarily caused by U.S. Federal Reserve (Fed) indications they would likely be slowing their expected pace of future interest rate increases, as well as an increased demand for safe haven assets, as the volatility in the equity markets pushed investors away from risk assets. As a result, U.S. fixed income markets were positive across maturities and qualities for the period. The broad market Barclays U.S. Aggregate Index returned a solid 3.0% during the quarter. This broad market performance was led by investment grade corporates which benefitted from their higher duration as well as interest rate spreads that declined significantly in the second half of the quarter. U.S. Treasury Inflation Protected Securities (TIPS) returned 4.5% for the quarter and were aided by higher inflation expectations (lower TIPS yields) and increased commodity prices. Global fixed income indices outperformed their U.S. counterparts in USD terms with a tailwind from both falling interest rates and a weakening USD.

Quarter Performance

1-Year Performance

- U.S. macroeconomic data fueled domestic equity returns for the 1st quarter. Early on, concerns about U.S. GDP growth, growing initial jobless claims, weakness in U.S. manufacturing, low oil prices, and the potential for a steady pattern of interest rate hikes resulted in considerable downside momentum for U.S. equity indices. However, as the quarter progressed, employment and income data appeared stronger, moving to a post-recession low, and regional manufacturing surveys showed signs of improvement. In addition, oil prices rebounded from a low of \$26/barrel in February to \$38/barrel at the end of March, and, despite signs of rising inflation, the Fed lowered its median projection for the number of interest rate increases in 2016 from four to only two.
- Domestic equity index performance was largely positive during the 1st quarter. Value stocks outperformed growth stocks across the capitalization spectrum reversing a persistent trend of growth style outperformance. This shift was likely due to investors seeking the relative safety and stability of value stocks given the turbulent start to the year. Mid cap value stocks were the best performers across the value spectrum, returning 3.9% during the period. Small cap value (1.7%) and large cap value (1.6%) benchmarks posted similar results but were up less than half of the MidCap Index's performance. Within the growth spectrum, large cap stocks were the best performers (0.7%), followed by mid cap stocks (0.6%). The Russell 2000 Growth Index was the largest underperformer, returning -4.7% for the quarter, substantially trailing other indices.
- Large cap stocks, as represented by the Russell 1000's return of 0.5%, posted the only positive core index performance over the 1-year period. However, style bias was mixed. The Russell 1000 Growth Index was the best performer, returning 2.5% for the year. In contrast, the growth indices for both mid (-4.7%) and small (-11.8%) cap stocks posted negative results and underperformed their respective value benchmarks.
- Despite their underperformance over the 1-year period, from a valuation perspective, current Price/Earnings ratios (P/E) for value indices appear stretched relative to their long-term (20-year) averages. The mid cap value index appears most expensive at 122% of its long-term average. In contrast, current P/E valuations for the growth indices fall between 90% and 95% of their historical long-term averages.

Quarter Performance - Russell Style Series

1-Year Performance - Russell Style Series

- Large cap sector performance was generally positive for the 1st quarter with eight of the ten economic sectors within the Russell 1000 Index posting gains. The Health Care and Financials sectors were the only laggards returning -6.1% and -4.3% respectively. Health Care losses were led by the struggling biotech industry as stock prices reacted to increased political discussion surrounding drug price reform. An increased likelihood of low interest rates in the near-term hurt the earnings outlook for Financials. The strongest performing sectors for the quarter were the relatively defensive Utilities (15.7%), Telecom Services (15.2%) and Consumer Staples (5.5%) sectors. These sectors benefitted from their lower perceived risk and higher dividend yields as investors sought shelter from the quarter's early volatility. Over the 1-year period, six of ten economic sectors in the large cap index had positive performance, with the defensive sectors, largely due to performance in the 1st quarter, posting the strongest returns. On the negative side, the oil price driven Energy sector was the worst performer by a sizable margin returning -17.9% for the period. Health Care (-6.4%), Financials (-4.0%), and Materials (-5.6%) were also negative for the 1-year period.
- Small cap sector returns were, by and large, worse than corresponding large cap sector returns. Similar to large cap sectors, small cap sector performance was largely positive for the quarter. However, in contrast to the large cap benchmark's balanced sector results, only the small cap index's two most defensive sectors, Utilities (10.0%) and Telecom Services (6.1%), managed to post positive returns over the 1-year period. Much like the Russell 1000, the Energy sector posted the Russell 2000's weakest 1-year sector performance, returning -44.0%. Health Care (-20.4%), Materials (-19.5%), Consumer Discretionary (-12.8%), and Industrials (-11.3%) also posted double-digit losses for the period.
- Using the S&P 500 as a proxy, trailing P/E ratios for six GICS sectors were below their 20-year averages at quarter-end. The Telecom Services and Financials sectors were trading at the largest discount to their long-term average P/E ratios. Conversely, Energy and Utilities sector valuations were the most extended relative to their historical P/E ratios.

- Like their domestic counterparts, the 1st quarter of the year was very volatile for international stocks. The beginning of the quarter was difficult across markets as investors struggled with uncertainty surrounding central bank policies, global economic growth, and commodity prices. As is usual, this uncertainty caused investors to flee risk assets, putting downward pressure on equity prices. Markets began to recover in the latter half of the quarter as the Bank of Japan (BoJ), People's Bank of China (PBoC), and European Central Bank (ECB) were just a few of those announcing new measures aimed at stimulating their economies. Developed markets struggled throughout the quarter while emerging markets managed to reverse their persistent trend of underperformance as commodity prices rebounded and the USD weakened. The weaker USD provided a boost to local currency returns across major international indices. For the 1-year period, USD performance for each of the international indices we track was negative. Developed markets returned a weak -8.3% for the 1-year period, but emerging markets fared even worse with a return of -12.0%.
- Despite relief from the ECB's announcement of additional monetary policy easing, developed markets in Europe were negative for the quarter. Weak GDP growth, below target inflation, and security concerns stemming from the March terrorist attacks in Brussels all impacted returns. Stress was compounded when the U.K. called for a referendum to review the country's continued membership in the European economic bloc. Within the emerging and developed market indices, Greece and Italy were the worst performers posting USD returns of -12.2% and -11.7%, respectively, for the quarter.
- Japanese equities, the developed market index's largest component, struggled for the quarter posting a return of -6.5% in USD and -12.5% in local currency. Investors weighed ongoing global macroeconomic uncertainty and began to lose faith in the ability of "Abenomics" to lift the country out of its growth malaise. Japanese market returns were also affected by the BoJ's unexpected move to a negative interest rate policy at the end of January, making it the sixth central bank to do so, in an attempt to stimulate economic growth and place upward pressure on inflation. Investors in Chinese markets had an exceptionally difficult start to the year as a new circuit breaking mechanism forced an early market close twice in January. The recent round of market turbulence stemmed from fears of the impending expiration of selling restrictions on major shareholders, which were later extended, and a weakening Chinese yuan.

Source: MSCI Global Index Monitor (Returns are Net in USD)

- Due to a steady downward move in interest rates during the 1st quarter, fixed income index performance was positive for the period. Fixed income indices benefitted from Federal Reserve Chair Janet Yellen's dovish comments in February and March, which implied uncertainty underlying the U.S. economic outlook would likely mitigate the pace of future interest rate hikes. This information resulted in a consensus expectation for two rate increases this year versus the prior expectation of four. This rate news, coupled with early quarter volatility in risk assets, fueled investor demand for defensive investments such as U.S. Treasuries. This series of events resulted in yields falling throughout the period, especially at the longer-end of the yield curve. This curve flattening benefited longer duration indices with the 7.3 year duration Barclays U.S. Corporate Investment Grade Index returning a solid 4.0% for the quarter. Over the 1-year period, lower quality issues struggled, with Baa and high yield indices registering losses of -0.8% and -3.7%, respectively, as investors preferred the relative safety of high credit quality issues.
- The Barclays Aggregate benchmark, which is a broad representation of U.S. fixed income markets, posted a return of 3.0% for the quarter. As detailed above, higher duration sectors within the broad Aggregate index outperformed lower duration sectors with investment grade corporates (4.0%) and Treasury securities (3.2%) posting the largest gains. Hurt by its relatively low duration, the Barclays U.S. Mortgage Index returned a lower 2.0% for the quarter. While the sector components of the Aggregate benchmark also posted positive returns for the 1-year period, Treasury and mortgage-backed issues were the strongest performing; each returning 2.4%. The Barclays U.S. Corporate Investment Grade Index returned 0.9%, negatively impacted by widening credit spreads throughout most of the period.
- Due to higher average durations and credit spreads that declined in the second half of the quarter, lower credit quality investment grade securities outperformed higher quality issues during the 1st quarter. A and Baa rated securities returned 3.9% and 4.3%, respectively, versus a 2.7% return for AAA issues. High yield bonds also had a strong quarter with the Barclays U.S. High Yield Index returning 3.4%. As noted, high yield spreads rose dramatically in the first half of the quarter causing the index to trade down by as much as 5.0% through early February but quickly changed course as the quarter progressed to end the period lower than where they began 2016. Despite the strong quarter, the Barclays U.S. High Yield Index returned -3.7% over the 1-year period.

Quarter Performance

1-Year Performance

- U.S. TIPS finished the 1st quarter with a solid 4.5% return as inflation expectations rose as the USD weakened and commodity prices started to rebound. TIPS returns for the 1-year period, while positive, were a more modest 1.5%.
- In USD terms, international fixed income indices posted the largest gains for the quarter and 1-year period. Despite the relatively low interest rates in international markets, the Barclays Global Aggregate ex U.S. benchmark returned 8.3% for the quarter. The index benefitted from its higher duration, additional monetary policy easing and the weakening USD. Global bonds were also strong over the 1-year period, posting a return of 6.7%.
- Many of the drivers of the index performance detailed in the bar graphs on the previous page is visible on a time series basis in the line graphs to the right. The '1-Year Trailing Market Rates' graph illustrates that the 10-year Treasury (green line) fell over the quarter, providing a boost to bond performance. The blue line illustrates changes in the BAA OAS (Option Adjusted Spread), which quantifies the additional yield premium that investors demand to purchase and hold non-Treasury issues. When spreads widen (tighten), it is equivalent to an interest rate increase (decrease) on corporate bonds. After falling below 2.0% early in 2015, this spread rose throughout the remainder of the calendar year. There was considerable movement in this spread from the start of 2016, as it widened to near term highs, before falling through the second half of the quarter, ending the period only slightly lower than it began. The interest rate paid on 10-year TIPS (orange line) has fallen since late last year as higher inflation expectations have increased demand for these securities. The bottom graph provides a snapshot of the U.S. Treasury yield curve at each of the last four calendar quarters. While rates stayed relatively flat at the short-end of the curve, maturities beyond 3-years saw yields fall to their lowest quarter-end levels in a year.
- The Fed has stated future rate increases would be implemented at a measured pace and with ongoing assessment of current economic data. Geopolitical events and stimulus programs in other countries should keep demand for U.S. Treasury issues elevated and put downward pressure on how high domestic rates will rise in the short-term.

Fiduciary's objective is to buy durable business at value prices in order to achieve top in class investment results over a three to five year time horizon. Fiduciary considers themselves long-term investors, not traders. They will typically hold between 20-30 companies in their portfolio with an average turnover of 35%. The research process is geared toward finding six new investment ideas for the portfolio in a given year. All investment ideas are generated by a research team consisting of six individuals, rather than relying on a single portfolio manager. As of March 31, 2016, Fiduciary had a market value of \$12,110,535.

Stacey Braun utilizes a sector neutral, bottom up equity strategy which closely aligns their sector weightings to those of the S&P 500 Index. The firm employs an active flexible investment approach. Cash equivalents are used as a defensive measure in times of declining equity markets. Their equity portfolios consist of a diverse group of stocks selected through fundamental and technical analysis. Securities are chosen through their analysis are compared to their peers before purchase. This process results in an emphasis on growth at a reasonable price. As of March 31, 2016, Stacey Braun had a market value of \$11,523,198.

The Stephens Mid Cap Growth portfolio is a diversified portfolio that seeks long term growth of capital by investing primarily in common stock of U.S. companies with market capitalizations of between \$1.5 billion to \$12.5 billion. They select mid cap growth companies that are established growth companies that have achieved above average growth. The combination of core growth and catalyst growth stocks positions the portfolio for varying market conditions. As of March 31, 2016 Stephens had a market value of \$11,018,371.

The strategy is designed to exploit inefficiencies in the small cap sector of the market by carefully employing high value-added proprietary research in a universe of small capitalization, low-expectation stocks. This process is directed toward the discovery of companies in which the value of the underlying business is significantly greater than the market price. The portfolio's goal is to consistently generate superior returns while assuming below average levels of risk. As of March 31, 2016, Barrow, Hanley, MeWhinney & Strauss had a market value of \$16,104,453.

The ARI Master Limited Partnerships (MLPs) strategy is a diversified portfolio consisting primarily of publicly traded partnerships focused in the natural resources and energy infrastructure industries. The objective is to provide high levels of total returns and a growing cash yield. It offers low correlation to the broader equity market over the long-term. As of March 31, 2016, the ARI MLP had a market value of \$11,773,096.

McKay Shields Core Plus seeks to outperform the benchmark by eliminating or reducing uncompensated risk while opportunistically allocating investments across a range of core and off-benchmark sectors. The fund typically invests in the same sectors represented by the Barclays U.S. Aggregate Bond Index, as well as high yield, emerging market debt, and non-US Dollar exposure. Their philosophy is centered on their pursuit of consistent, superior rates of return with low volatility. Their goal for the product is to provide enhanced returns over a full market cycle with lower-than market risk. This portfolio replaced Smith Affiliated during the first quarter of 2014. As of March 31, 2016, McKay Shields had a market value of \$33,744,696.

Smith Graham uses a bottom-up methodology with independent examination of each investment opportunity, rather than being process driven by an economic view. The portfolio focuses on opportunities where they believe the reward is at least two times greater than the visible risk. The investment team focuses on five key factors; security selection, sector rotation, yield curve positioning, volatility management, and duration management. As of March 31, 2016, Smith Graham had a market value of \$31,389,453.

Executive Summary

Source: Port of Houston Authority Restated Retirement Plan Actuarial Valuation Report as of August 1, 2015. The funded ratio is calculated by dividing the actuarial value of assets by the actuarial accrued liability.

The 2013 funded status was calculated as 100.7%, prior to reduction of the actuarial assumption from 7.25% to 7.00%.

Active Return	- Arithmetic difference between the manager's performance and the designated benchmark return over a specified time period.
Alpha	- A measure of the difference between a portfolio's actual performance and its expected return based on its level of risk as determined by beta. It determines the portfolio's non-systemic return, or its historical performance not explained by movements of the market.
Beta	- A measure of the sensitivity of a portfolio to the movements in the market. It is a measure of the portfolio's systematic risk.
Consistency	- The percentage of quarters that a product achieved a rate of return higher than that of its benchmark. Higher consistency indicates the manager has contributed more to the product's performance.
Down Market Capture	- The ratio of average portfolio performance over the designated benchmark during periods of negative returns. A lower value indicates better product performance
Downside Risk	- A measure similar to standard deviation that utilizes only the negative movements of the return series. It is calculated by taking the standard deviation of the negative quarterly set of returns. A higher factor is indicative of a riskier product.
Excess Return	- Arithmetic difference between the manager's performance and the risk-free return over a specified time period.
Excess Risk	- A measure of the standard deviation of a portfolio's performance relative to the risk free return.
Information Ratio	- This calculates the value-added contribution of the manager and is derived by dividing the active rate of return of the portfolio by the tracking error. The higher the Information Ratio, the more the manager has added value to the portfolio.
R-Squared	- The percentage of a portfolio's performance that can be explained by the behavior of the appropriate benchmark. A high R-Squared means the portfolio's performance has historically moved in the same direction as the appropriate benchmark.
Return	- Compounded rate of return for the period.
Sharpe Ratio	- Represents the excess rate of return over the risk free return divided by the standard deviation of the excess return. The result is an absolute rate of return per unit of risk. A higher value demonstrates better historical risk-adjusted performance.
Standard Deviation	- A statistical measure of the range of a portfolio's performance. It represents the variability of returns around the average return over a specified time period.
Tracking Error	- This is a measure of the standard deviation of a portfolio's returns in relation to the performance of its designated market benchmark.
Treynor Ratio	- Similar to Sharpe ratio but utilizes beta rather than excess risk as determined by standard deviation. It is calculated by taking the excess rate of return above the risk free rate divided by beta to derive the absolute rate of return per unit of risk. A higher value indicates a product has achieved better historical risk-adjusted performance.
Up Market Capture	- The ratio of average portfolio performance over the designated benchmark during periods of positive returns. A higher value indicates better product performance.

The Bogdahn Group compiled this report for the sole use of the client for which it was prepared. The Bogdahn Group is responsible for evaluating the performance results of the Total Fund along with the investment advisors by comparing their performance with indices and other related peer universe data that is deemed appropriate. The Bogdahn group uses the results from this evaluation to make observations and recommendations to the client.

The Bogdahn Group uses time-weighted calculations which are founded on standards recommended by the CFA Institute. The calculations and values shown are based on information that is received from custodians. The Bogdahn Group analyzes transactions as indicated on the custodian statements and reviews the custodial market values of the portfolio. As a result, this provides The Bogdahn Group with a reasonable basis that the investment information presented is free from material misstatement. This methodology of evaluating and measuring performance provides The Bogdahn Group with a practical foundation for our observations and recommendations. Nothing came to our attention that would cause The Bogdahn Group to believe that the information presented is significantly misstated.

This performance report is based on data obtained by the client's custodian(s), investment fund administrator, or other sources believed to be reliable. While these sources are believed to be reliable, the data providers are responsible for the accuracy and completeness of their statements. Clients are encouraged to compare the records of their custodian(s) to ensure this report fairly and accurately reflects their various asset positions.

The strategies listed may not be suitable for all investors. We believe the information provided here is reliable, but do not warrant its accuracy or completeness. Past performance is not an indication of future performance. Any information contained in this report is for informational purposes only and should not be construed to be an offer to buy or sell any securities, investment consulting, or investment management services.

Additional information included in this document may contain data provided by from index databases, public economic sources and the managers themselves.
